

SHRIMP SHIELD™

| INCREASE YIELD | MAXIMIZE SURVIVAL | IMPROVE FCR |

THE SCIENTIFIC WAY TO PROTECT YOUR INVESTMENT

WATER CONDITIONING MICROBES reduce ammonia, nitrate and nitrite, while digestion organic sludge. PROBIOTIC MICROBES improve shrimp growth, survival and feed conversion rates..

COMPOSITION: Freeze dried biological formula of natural microbes, enzymes, micronutrients and amino acids on a special carrier designed to improve microbial growth rates when applied to aquaculture ponds.

PROCEDURE: Initial Dosage: 4 water soluble bags (1Kg) per Hectare once a week, for 2 weeks. Maintenance Dosage: 2 water soluble bags (0.5Kg) per Hectare once a week thru the remaining growth cycle. For densities <80pls/M2 of White Shrimp OR <30pls/M2 of Black Tiger Shrimp.

NOTE: For higher shrimp densities or suspected disease conditions, increase the dose to 1Kg per week per Hectare.

APPLICATION: Start with clean water and clean pond. Throw water soluble packets near the pond center at locations for even spacing, ie: head, end, middle and lower sections of the pond.

AID: Aids in the competitive exclusion of Vibrio (Luminescent bacteria), Pseudomonas, Aeromonas, Streptococcus, Allococcus, Myxobacterium, Columnaris ESC, and other gram-negative pathogens.

INVESTMENT

PRODUCT SPECIFICATIONS:

Bacterial Count 2.0 billion cfu/gm
 Appearance Tan Granule
 Color Yeast
 pH Neutral
 Effective pH Range 5.8 to 10.5
 Shelf Life 2 years
 Effective Temperature Range 10° to 38°C (50° to 100°F)

TESTIMONIALS:

"Many (around me), around twenty something and counting (have lost their ponds to white spot). By the way, I am harvesting the pacific white next Saturday (at 12 week grow out cycle)." ~ Khan Le, July 26, 2011
 Harvest Results: 4,189 LBS/Acre

"... As a shrimp farmer, I know, if used correctly, ShrimpShield can greatly reduce the occurrence of WSS (white spot) and other diseases ..."
